NIMA AI

Product & Functionality Brief

1. PRODUCT OVERVIEW

Nima is an **AI stylist + virtual try-on + social fashion discovery + shopping platform**.

Nima should feel like a **fashion playground**, not a traditional marketplace. Users should be able to discover fashion, experiment with outfits, get AI styling advice, see themselves in clothes, interact with friends and shop.

Core loop:

Discover → Style → Try On → Share → Save → Shop → Learn → Recommend

2. GUEST EXPERIENCE & ACCOUNT CREATION

Users **do not need an account to use Nima.**

Guests should be able to:

- Browse For You
- Explore looks
- View products
- View public profiles
- Browse sellers
- Window-shop

An account should only be required for features that need persistent personal data, such as:

- Try-on
- Saving personal looks
- Wardrobe
- Lookbooks
- Following
- DMs
- Posting looks
- Persistent personalization

- Purchasing where required

Account prompts should explain the benefit:

> "Create an account to try this look on yourself."

Important

Creating an account does NOT require completing the questionnaire.

A registered user can use Nima normally even with an incomplete questionnaire.

3. USER QUESTIONNAIRE / STYLE PROFILE

After creating an account, Nima should encourage users to complete a style questionnaire.

Collect:

Demographics

- Age
- Gender
- Location where relevant

Style

- Aesthetics/styles
- Colours
- Casual/office/elegant/streetwear/etc.

Shopping

- Typical budget range

Sizing

- Clothing size
- Shoe size
- Other relevant measurements

The questionnaire can be completed all at once, but **users can exit and finish it later**.

Completed answers should save automatically.

The questionnaire must never block access to the user's account or For You page.

The more information the user provides, the better Nima's recommendations become.

4. PHOTOS

Photo upload is independent from the questionnaire.

Users can upload photos before or after completing their profile.

Support different photos for different use cases:

- **Full-body:** complete outfit try-on
- **Head/upper-body:** jewellery, sunglasses and other accessories

Users should be able to add, replace and delete photos.

5. FOR YOU

The For You page is the main personalized discovery feed.

It should include:

- Curated outfits
- Products
- AI-generated looks
- Recommended looks
- Seller content
- User-generated looks
- Occasion/seasonal recommendations

Personalization should learn from:

- Questionnaire
- Likes
- Saves
- "Not for me"
- Products viewed
- Looks viewed

- Try-ons
- Recreated looks
- Follows
- Purchases
- Wardrobe activity

Guests can also access For You, with personalization based on available session behaviour.

6. EXPLORE & SOCIAL

Explore allows users to discover other people's looks.

Users can:

- Like
- Save
- Share
- Say "Not for me"
- Recreate
- Try on
- View products used in the look

Profiles

Users can have one account that functions as both **buyer and seller**.

Profiles can show:

- Created looks
- Tried-on looks
- Products being sold
- Public content

Users can follow accounts/stores.

Follower counts should NOT be publicly visible.

Sellers can see their follower numbers privately in their dashboard.

7. ASK NIMA — AI STYLIST

Ask Nima is the AI styling assistant.

Users can ask:

- What should I wear?
- Style this item.
- Create an outfit for an occasion.
- Find something within my budget.
- Make this outfit more casual/elegant.
- What goes with this?

Nima should use the user's:

- Style
- Budget
- Size
- Previous behaviour
- Wardrobe
- Available products

to create personalized recommendations.

8. VIRTUAL TRY-ON

Users can try on:

- Individual products
- Complete outfits
- Accessories
- Mix-and-match combinations

Users should be able to continuously change items:

> "Change the top."
> "Add heels."
> "Add jewellery."

They can also select multiple products and create a complete look.

Try-on limits

Because AI generation has a cost, free users should have a usage limit, e.g. **20 try-ons per week**, subject to final economics.

IMPORTANT: NO SIZE GUARANTEE

Nima guarantees **visualization, not physical fit**.

The AI image showing a garment on the user does not guarantee that the actual garment will fit.

Users should always refer to the seller's size guide.

9. RECREATE LOOK

Any eligible look should have a **Recreate Look** function.

Users can recreate another person's outfit and:

- Try it on
- Change individual pieces
- Find alternatives
- Use their own wardrobe
- Purchase the products

This should also work for looks shared by friends.

10. MY WARDROBE

Users can photograph/upload clothes they already own.

Nima categorizes them into a digital wardrobe.

Users can then:

- View their wardrobe
- Mix and match items
- Create outfits
- Ask Nima to style them
- Combine wardrobe items with products sold on Nima

Example:

> "Find me a top that works with these trousers and costs under KSh 3,000."

11. LOOKBOOKS

Users can create collections of outfits around a purpose.

Examples:

- Vacation
- Wedding
- Work
- Date night

A Lookbook can contain:

- Existing wardrobe items
- Products they want to buy
- Saved looks
- AI-generated outfits

Users can organize outfits by day or occasion.

Saved Looks = individual saved outfits.

Lookbooks = organized collections of multiple outfits.

12. MESSAGING & SHARING

Users should have DMs to:

- Message friends
- Share products
- Share looks
- Share try-ons
- Share Lookbooks

Recipients should be able to open a shared look and **recreate/try it on themselves.**

13. GHOST AI MODEL

Sellers can upload basic product photos, including clothing photographed on the floor or without a model.

Nima should process the image into a cleaner catalogue presentation, such as:

- Background removal
- White/clean background
- Product isolation
- Ghost mannequin

14. SHOPPING & PAYMENTS

Users should have:

- Product pages
- Cart
- Checkout
- Order information

Payments should integrate with **Fingo Pay**, which has M-Pesa and cards payment methods incorporated.

15. LOGISTICS

Nima does **not** operate its own delivery network.

Delivery should be handled through third-party logistics partners, right now including Pick Up Mtaani has been incorporated. However, that model and process has not been mapped out.

The architecture should allow logistics providers to be integrated without rebuilding the commerce system.

16. SELLER SIDE

A buyer can also become a seller using the same account.

Seller capabilities

- Create/manage products
- Add photos
- Set prices
- Add sizes/colours
- Manage inventory
- Manage orders
- View sales

Seller dashboard

Analytics should eventually include:

- Product views
- Clicks
- Likes
- Saves
- Try-ons
- Purchases
- Conversion
- Customer demographics
- Customer preferences
- Followers

One of Nima's key seller advantages should be showing **what customers do before purchasing**, particularly try-on and engagement behaviour.

17. SELLER MONETIZATION

Free

Anyone can list and sell products with basic seller functionality.

Advertising

Sellers can pay for:

- Product promotion
- Look promotion
- Increased visibility
- Relevant audience reach

Premium SaaS

Premium sellers can receive:

- Advanced customer demographics
- Business insights
- Advanced analytics
- Advertising tools
- Customer support

- Potentially Nima-managed customer service

18. TRUST

Nima should prioritize trust rather than follower popularity.

Potential trust signals:

- Verified sellers
- Reviews
- Successful orders
- Seller responsiveness
- Product information
- Return/refund information

Follower counts remain private.

19. ACCOUNT & PRIVACY

Users should be able to manage:

- Profile
- Photos
- Style preferences
- Sizes
- Budget
- Privacy
- Public/private looks
- Public/private wardrobe
- Connections
- Account information

Users control what becomes public.

AI try-ons should not automatically become public.

20. CORE PRODUCT RULES

1. **Nima must be usable without an account.**
2. **For You must be accessible to guests.**
3. **Account creation should be progressive.**

4. **Questionnaire completion must never block account usage.**
5. **The questionnaire can be completed all at once or later.**
6. **Questionnaire answers save automatically.**
7. **Photo upload is independent of the questionnaire.**
8. **Nima is an AI stylist, not just a shopping search engine.**
9. **Virtual try-on is visualization, not a sizing guarantee.**
10. **Buyers and sellers use the same account.**
11. **Follower counts are private.**
12. **Nima is social and entertaining, not just transactional.**
13. **Nima does not operate its own logistics.**
14. **AI try-ons should have reasonable usage limits.**
15. **The system should learn from user behaviour to improve recommendations.**

21. CORE NIMA EXPERIENCE

A user should be able to:

Open Nima without an account → Browse → Discover a look → Create an account when they want deeper functionality → Upload a photo → Try it on → Ask Nima to style it → Change the outfit → Save → Share with friends → Recreate looks → Build a wardrobe/Lookbook → Shop.

At the same time, sellers can:

List → Showcase → Sell → Advertise → Understand customers → Use Nima's AI and analytics to improve their business.

The ultimate goal:

Nima helps people discover what they want to wear, see themselves in it, experiment with it, and decide what they want to buy.
